

ACCESS TO HEALTHCARE: LUXURY OR UNIVERSAL RIGHT?

17/10

POVERTY WATCH KEY FINDINGS

Accessible mental & general healthcare

People in poverty or at-risk of poverty experienced newly developed or worsened mental health hardships – due to isolation and the lacking ability to access social and familial support systems – as well as dental health concerns due to insufficient health insurance coverage and unequal access to dental care. This information not only highlights the lack of access that these individuals have to dental and healthcare as a universal right, but also the insufficient support they are given when facing psychological and mental difficulties.
